KNOW WHEN SOMEONE MALICIOUS IS IN YOUR NETWORK

1 Detect cyber threat activity on your network and improve your network security

We identify potential threat activity on your network while delivering managed IT network security that is flexible and scalable to any size business and is tailored to fit your specific business needs. Detect real cyber threat activity on your network and improve your network security defense against cyber threat attacks to your business.

2 Boost Defense

No need to increase analyst hours or staff. We investigate any alerts on your network, escalates real incidents to your attention, and helps you eliminate the threat. Improve your businesses managed IT network security with Perch threat detection and response platform. It's flexible, scalable to any size business and tailored to fit your specific needs.

3 Detect What's Eluded Your Defenses

Firewalls are a perimeter defense to protect your network. Shartega IT can help your business detect what's already gotten through. With Perch's security solution, your business has a fully managed IT security solution that is easy to deploy and manage.

Shartega IT has partnered with **Perch Security** to provide a **Complete Managed Threat Detection and Response Platform** for your business. We have integrated our monitoring platforms with Perch's security and threat intelligence platform to detect and respond to attacks in real-time. We want to know immediately if someone has breached your network, endpoints, or email/collaboration platform.

24/7 Security Operations Center (SOC)

We can help launch your cybersecurity program, or add depth to the visibility you already have. Utilizing our partnership with Perch's threat detection and response solution we can provide your business with a complete SOC to detect and alert your business when a breach is occurring. Co-managed threat detection and response you can afford to deploy anywhere to deliver your business with managed IT network security.

287 days
